

Glen Gerbush

hello@glen.industries • Massachusetts • github.com/glengerbush

Senior software engineer with 7 years of production experience, including 4 years at Amazon leading frontend platform work serving 2M+ users. Built an accessible React component library adopted across multiple teams, shaped a BFF API layer powering React clients, and established E2E testing and observability foundations that improved release confidence at scale. Currently building consumer-grade streaming LLM interfaces, evaluation frameworks, and full-stack AI features. Strong across React and TypeScript, with a working command of the broader frontend and Node ecosystem, and a consistent focus on developer experience, performance, accessibility, and the platform-level work that lets product teams ship with confidence.

EXPERIENCE

Software Development Consultant

Jul 2023 – Present

- Built consumer-grade streaming UIs for real-time, token-by-token LLM responses across web and mobile, profiling and tuning client-side rendering for smooth output, and integrating multimodal pipelines (Whisper STT, ElevenLabs TTS) for conversational interfaces.
- Designed LLM evaluation frameworks covering A/B prompt testing, regression checks, and error analysis to drive measurable improvements in response quality and reliability.
- Set up frontend platform foundations across client projects: shared component patterns in React/TypeScript, Vite/Vitest build and test configuration, and CI/CD pipelines via GitHub Actions that took new projects from local dev to deployed in under a day.
- Built a reusable SvelteKit PWA scaffold for a client engagement: Convex BFF backend, end-to-end encryption, Vitest test infrastructure, and an automated GitHub Actions pipeline deploying to GitHub Pages with custom domain routing.
- Led 4 engineers across 4 concurrent client projects, translating business requirements into system designs and shipping production workflows end-to-end.

Stack: *TypeScript, React, React Native, SvelteKit, Next.js, Node.js, Vite, Vitest, GitHub Actions, Python, OpenAI, LangChain, Whisper, ElevenLabs, Convex, Supabase, AWS*

Amazon — Software Development Engineer II

Nov 2020 – Jul 2023

- Led design and launch of the front-end platform for Amazon's internal mobility product, standardizing the global transfer process for 2M+ employees and increasing application completion rates from 10% to 90%.
- Built an accessible React component library adopted by multiple teams, establishing shared UI patterns, prop interfaces, and documentation that reduced duplicated frontend work across the organization.
- Partnered with the backend lead to shape the BFF API layer powering the React front-end, advising on SLAs, data shaping, and performance tradeoffs, and personally authoring several endpoints.
- Established testing and observability foundations (Cypress E2E suites, Jest unit coverage, and CloudWatch metrics dashboards) that improved release confidence and reduced on-call response time.
- Architected microservices on AWS (Lambda, API Gateway, DynamoDB) defined in CDK, enabling clean team splits as the project scaled; mentored engineers and drove cross-team system design decisions across the frontend/backend boundary.

Stack: *React, TypeScript, Jest, Cypress, Kotlin, AWS Lambda, API Gateway, DynamoDB, CloudWatch, CDK, Docker*

Amazon — Software Development Engineer I

Sep 2019 – Nov 2020

- Built and operated APIs vending PII and highly confidential HR data to hundreds of internal applications globally, including on-call ownership and production incident response.
- Delivered backend services for a multi-year enterprise migration of Amazon's internal HR system.
- Within first two months of hire, rewrote and patched the internal permissions application; proposed a follow-on roadmap accepted and assigned to a sibling team.
- Led an offshore engineering team in Hyderabad through code review, pair programming, and roadmap planning to land a clean handoff of the critical permissions application.

Stack: *React, TypeScript, Ruby on Rails, Java, AWS Lambda, SQS, SNS, DynamoDB, Elasticsearch, Docker*

Zippity — Software Developer

Dec 2018 – Sep 2019

- One of two engineers responsible for all production systems; launched four React applications: admin dashboard, technician app, customer app, and kiosk system.
- Migrated backend infrastructure from Google Datastore to Heroku Postgres, improving query performance and maintainability.
- Partnered with C-suite on product roadmap and system design decisions.

Stack: *React, Redux, Python, Flask, Postgres, AWS EC2/EBS, Heroku*

EARLIER EXPERIENCE

- **The Academy Group — Systems Contractor (2018):** Designed and deployed a Flask/Postgres web portal for students, faculty, and parents. Backed by REST APIs on AWS. Oversaw contractors building mobile clients.
- **Embryo Options — Development Contractor (2018):** Built PCI-compliant payment processing workflows.
- **Dissectables — Founder & Principal Investigator (2014–2018):** Principal investigator on NSF/SBIR Phase I grant researching FFF printing, achieving proof of concept surgical simulation; designed and built the FFF 3D printers that supported the research, and managed a multidisciplinary team of designers, engineers, and scientists.
- **Oberlin College 3D Printlab — Associate, Founder (2013–2014):** After consulting for several professors at Oberlin College and Case Western Reserve School of Medicine, was invited to lead the creation of the Oberlin's first 3D printlab, serving the student body and local community; taught CAD and prototyping classes.

TECHNICAL SKILLS

Frontend & Platform: React, TypeScript, Next.js, SvelteKit, Redux, React Native, Vite, Vitest, Cypress, Jest, accessible component libraries, design systems

BFF & Backend: Node.js, BFF API design, Convex, Supabase, AWS Lambda, API Gateway, Python, Flask, Ruby on Rails, Java, Kotlin

Infrastructure & DevEx: AWS CDK, GitHub Actions (CI/CD), Docker, CloudWatch, build tooling, E2E & unit testing infrastructure, observability

Databases: DynamoDB, PostgreSQL, Elasticsearch, SQS/SNS

AI / LLMs: OpenAI GPT, RAG pipelines, prompt engineering, streaming LLM architectures, evaluation frameworks, Whisper, ElevenLabs

EDUCATION

Oberlin College — B.A.

2008 – 2012

Major: Latin Language & Literature • **Minor:** Chemistry • Relevant courses: Principles of Computer Science I & II (Java)
